|                  |   |    |
|------------------|---|----|
| <b>CHAPTER 1</b> | This Book's Organization: <i>Read Me First!</i> .....                     | 1  |
| 1.1              | Real People Can Read This Book.....                                       | 1  |
| 1.2              | Prerequisites.....  | 2  |
| 1.3              | The Organization of This Book .....                                       | 3  |
| 1.3.1            | What Are the Essential Chapters? .....                                    | 4  |
| 1.3.2            | Where's the Equivalent of Traditional Test<br>X in This Book? .....       | 4  |
| 1.4              | Gimme Feedback (Be Polite) .....  | 6  |
| 1.5              | Acknowledgments .....   | 6  |
| <b>Part 1</b>    | <b>The Basics: <i>Parameters, Probability,<br/>Bayes' Rule, and R</i></b> |    |
| <b>CHAPTER 2</b> | Introduction: <i>Models We Believe In</i> .....                           | 9  |
| 2.1              | Models of Observations and Models of Beliefs.....                         | 10 |
| 2.1.1            | Prior and Posterior Beliefs .....   | 12 |
| 2.2              | Three Goals for Inference from Data.....                                  | 12 |
| 2.2.1            | Estimation of Parameter Values .....                                      | 13 |
| 2.2.2            | Prediction of Data Values .....   | 13 |
| 2.2.3            | Model Comparison .....  | 13 |
| 2.3              | The R Programming Language .....  | 14 |
| 2.3.1            | Getting and Installing R .....  | 15 |
| 2.3.2            | Invoking R and Using the Command Line .....                               | 15 |
| 2.3.3            | A Simple Example of R in Action .....                                     | 16 |
| 2.3.4            | Getting Help in R.....  | 17 |
| 2.3.5            | Programming in R.....   | 18 |
| 2.4              | Exercises .....   | 20 |

|                  |   |    |
|------------------|---|----|
| <b>CHAPTER 3</b> | What Is This Stuff Called Probability? .....                  | 23 |
| 3.1              | The Set of All Possible Events .....                          | 24 |
| 3.1.1            | Coin Flips: Why You Should Care .....                         | 25 |
| 3.2              | Probability: Outside or Inside the Head .....                 | 25 |
| 3.2.1            | Outside the Head: Long-Run Relative<br>Frequency.....         | 25 |
| 3.2.2            | Inside the Head: Subjective Belief.....                       | 28 |
| 3.2.3            | Probabilities Assign Numbers to Possibilities .               | 29 |
| 3.3              | Probability Distributions .....                               | 30 |
| 3.3.1            | Discrete Distributions: Probability Mass .....                | 30 |
| 3.3.2            | Continuous Distributions: Rendezvous with<br>Density .....    | 31 |
| 3.3.3            | Mean and Variance of a Distribution .....                     | 37 |
| 3.3.4            | Variance as Uncertainty in Beliefs .....                      | 39 |
| 3.3.5            | Highest Density Interval (HDI).....                           | 40 |
| 3.4              | Two-Way Distributions.....                                    | 42 |
| 3.4.1            | Marginal Probability.....                                     | 43 |
| 3.4.2            | Conditional Probability .....                                 | 44 |
| 3.4.3            | Independence of Attributes .....                              | 46 |
| 3.5              | R Code .....  | 47 |
| 3.5.1            | R Code for Figure 3.1.....                                    | 47 |
| 3.5.2            | R Code for Figure 3.3.....                                    | 48 |
| 3.6              | Exercises .....   | 49 |
| <br>             |   |    |
| <b>CHAPTER 4</b> | Bayes' Rule .....   | 51 |
| 4.1              | Bayes' Rule .....   | 52 |
| 4.1.1            | Derived from Definitions of Conditional<br>Probability .....  | 53 |
| 4.1.2            | Intuited from a Two-Way Discrete Table .....                  | 54 |
| 4.1.3            | The Denominator as an Integral over<br>Continuous Values..... | 56 |
| 4.2              | Applied to Models and Data .....                              | 56 |
| 4.2.1            | Data Order Invariance .....                                   | 59 |
| 4.2.2            | An Example with Coin Flipping .....                           | 60 |
| 4.3              | The Three Goals of Inference .....                            | 63 |
| 4.3.1            | Estimation of Parameter Values .....                          | 63 |
| 4.3.2            | Prediction of Data Values .....                               | 63 |
| 4.3.3            | Model Comparison.....   | 64 |
| 4.3.4            | Why Bayesian Inference Can Be Difficult .....                 | 67 |
| 4.3.5            | Bayesian Reasoning in Everyday Life.....                      | 68 |

|       |                             |    |
|-------|-----------------------------|----|
| 4.4   | R Code .....                | 69 |
| 4.4.1 | R Code for Figure 4.1 ..... | 69 |
| 4.5   | Exercises .....             | 71 |

## Part 2 All the Fundamentals Applied to Inferring a Binomial Proportion

|                  |   |     |
|------------------|---|-----|
| <b>CHAPTER 5</b> | Inferring a Binomial Proportion via Exact Mathematical Analysis ..... | 77  |
| 5.1              | The Likelihood Function: Bernoulli Distribution.....                  | 78  |
| 5.2              | A Description of Beliefs: The Beta Distribution.....                  | 80  |
| 5.2.1            | Specifying a Beta Prior .....   | 81  |
| 5.2.2            | The Posterior Beta .....  | 84  |
| 5.3              | Three Inferential Goals .....   | 85  |
| 5.3.1            | Estimating the Binomial Proportion .....                              | 85  |
| 5.3.2            | Predicting Data .....   | 87  |
| 5.3.3            | Model Comparison .....  | 88  |
| 5.4              | Summary: How to Do Bayesian Inference .....                           | 90  |
| 5.5              | R Code .....  | 91  |
| 5.5.1            | R Code for Figure 5.2 .....   | 91  |
| 5.6              | Exercises .....   | 95  |
| <b>CHAPTER 6</b> | Inferring a Binomial Proportion via Grid Approximation .....          | 101 |
| 6.1              | Bayes' Rule for Discrete Values of $\theta$ .....                     | 102 |
| 6.2              | Discretizing a Continuous Prior Density.....                          | 102 |
| 6.2.1            | Examples Using Discretized Priors .....                               | 104 |
| 6.3              | Estimation .....  | 106 |
| 6.4              | Prediction of Subsequent Data.....                                    | 107 |
| 6.5              | Model Comparison.....   | 108 |
| 6.6              | Summary .....   | 109 |
| 6.7              | R Code .....  | 109 |
| 6.7.1            | R Code for Figure 6.2 and the Like.....                               | 109 |
| 6.8              | Exercises .....   | 112 |
| <b>CHAPTER 7</b> | Inferring a Binomial Proportion via the Metropolis Algorithm .....    | 117 |
| 7.1              | A Simple Case of the Metropolis Algorithm.....                        | 119 |
| 7.1.1            | A Politician Stumbles on the Metropolis Algorithm .....               | 119 |
| 7.1.2            | A Random Walk .....   | 120 |

|       |   |     |
|-------|---|-----|
| 7.1.3 | General Properties of a Random Walk .....             | 122 |
| 7.1.4 | Why We Care.....                                      | 125 |
| 7.1.5 | Why It Works.....                                     | 126 |
| 7.2   | The Metropolis Algorithm More Generally .....         | 129 |
| 7.2.1 | “Burn-in,” Efficiency, and Convergence .....          | 131 |
| 7.2.2 | Terminology: Markov Chain Monte Carlo.....            | 132 |
| 7.3   | From the Sampled Posterior to the Three Goals .....   | 132 |
| 7.3.1 | Estimation .....                                      | 134 |
| 7.3.2 | Prediction .....                                      | 136 |
| 7.3.3 | Model Comparison: Estimation of $p(D)$ .....          | 137 |
| 7.4   | MCMC in BUGS.....                                     | 139 |
| 7.4.1 | Parameter Estimation with BUGS.....                   | 140 |
| 7.4.2 | BUGS for Prediction .....                             | 143 |
| 7.4.3 | BUGS for Model Comparison .....                       | 145 |
| 7.5   | Conclusion.....                                       | 145 |
| 7.6   | R Code .....  | 146 |
| 7.6.1 | R Code for a Home-Grown Metropolis<br>Algorithm ..... | 146 |
| 7.7   | Exercises .....                                       | 150 |

|                  |   |     |
|------------------|---|-----|
| <b>CHAPTER 8</b> | Inferring Two Binomial Proportions via<br>Gibbs Sampling..... | 155 |
| 8.1              | Prior, Likelihood, and Posterior for Two<br>Proportions ..... | 157 |
| 8.2              | The Posterior via Exact Formal Analysis.....                  | 159 |
| 8.3              | The Posterior via Grid Approximation .....                    | 163 |
| 8.4              | The Posterior via Markov Chain Monte Carlo .....              | 165 |
| 8.4.1            | Metropolis Algorithm .....                                    | 165 |
| 8.4.2            | Gibbs Sampling.....   | 167 |
| 8.5              | Doing It with BUGS.....                                       | 173 |
| 8.5.1            | Sampling the Prior in BUGS.....                               | 174 |
| 8.6              | How Different Are the Underlying Biases? .....                | 175 |
| 8.7              | Summary .....   | 177 |
| 8.8              | R Code .....  | 178 |
| 8.8.1            | R Code for Grid Approximation (Figures 8.1<br>and 8.2) .....  | 178 |
| 8.8.2            | R Code for Metropolis Sampler (Figure 8.3).....               | 181 |
| 8.8.3            | R Code for BUGS Sampler (Figure 8.6) .....                    | 184 |
| 8.8.4            | R Code for Plotting a Posterior Histogram .....               | 186 |
| 8.9              | Exercises .....   | 188 |

|                   |  |     |
|-------------------|--|-----|
| <b>CHAPTER 9</b>  | Bernoulli Likelihood with Hierarchical Prior.....                                    | 191 |
| 9.1               | A Single Coin from a Single Mint .....   | 192 |
| 9.1.1             | Posterior via Grid Approximation .....   | 196 |
| 9.2               | Multiple Coins from a Single Mint .....  | 200 |
| 9.2.1             | Posterior via Grid Approximation .....   | 203 |
| 9.2.2             | Posterior via Monte Carlo Sampling .....   | 206 |
| 9.2.3             | Outliers and Shrinkage of Individual<br>Estimates .....                              | 212 |
| 9.2.4             | Case Study: Therapeutic Touch .....  | 217 |
| 9.2.5             | Number of Coins and Flips per Coin.....  | 219 |
| 9.3               | Multiple Coins from Multiple Mints .....   | 219 |
| 9.3.1             | Independent Mints .....  | 219 |
| 9.3.2             | Dependent Mints.....   | 224 |
| 9.3.3             | Individual Differences and Meta-Analysis .....                                       | 227 |
| 9.4               | Summary .....  | 228 |
| 9.5               | R Code .....   | 228 |
| 9.5.1             | Code for Analysis of Therapeutic-Touch<br>Experiment .....                           | 228 |
| 9.5.2             | Code for Analysis of<br>Filtration-Condensation Experiment .....                     | 231 |
| 9.6               | Exercises .....  | 235 |
| <b>CHAPTER 10</b> | Hierarchical Modeling and Model Comparison .....                                     | 241 |
| 10.1              | Model Comparison as Hierarchical Modeling.....                                       | 241 |
| 10.2              | Model Comparison in BUGS .....   | 244 |
| 10.2.1            | A Simple Example .....   | 244 |
| 10.2.2            | A Realistic Example with “Pseudopriors” .....  | 246 |
| 10.2.3            | Some Practical Advice When Using<br>Transdimensional MCMC with<br>Pseudopriors ..... | 253 |
| 10.3              | Model Comparison and Nested Models .....   | 254 |
| 10.4              | Review of Hierarchical Framework for Model<br>Comparison .....                       | 256 |
| 10.4.1            | Comparing Methods for MCMC Model<br>Comparison.....                                  | 257 |
| 10.4.2            | Summary and Caveats .....  | 258 |
| 10.5              | Exercises .....  | 259 |
| <b>CHAPTER 11</b> | Null Hypothesis Significance Testing .....   | 265 |
| 11.1              | NHST for the Bias of a Coin.....   | 267 |
| 11.1.1            | When the Experimenter Intends to Fix $N$ .....                                       | 267 |

|                   |   |            |
|-------------------|---|------------|
| 11.1.2            | When the Experimenter Intends to Fix $z$ .....                          | 270        |
| 11.1.3            | Soul Searching .....  | 272        |
| 11.1.4            | Bayesian Analysis .....   | 274        |
| 11.2              | Prior Knowledge about the Coin .....                                    | 274        |
| 11.2.1            | NHST Analysis .....   | 275        |
| 11.2.2            | Bayesian Analysis .....   | 275        |
| 11.3              | Confidence Interval and Highest Density Interval .....                  | 277        |
| 11.3.1            | NHST Confidence Interval .....  | 277        |
| 11.3.2            | Bayesian HDI .....  | 280        |
| 11.4              | Multiple Comparisons .....  | 281        |
| 11.4.1            | NHST Correction for Experimentwise Error .....                          | 282        |
| 11.4.2            | Just One Bayesian Posterior No Matter How You Look at It .....          | 284        |
| 11.4.3            | How Bayesian Analysis Mitigates False Alarms .....                      | 285        |
| 11.5              | What a Sampling Distribution <i>Is</i> Good For .....                   | 286        |
| 11.5.1            | Planning an Experiment .....  | 286        |
| 11.5.2            | Exploring Model Predictions (Posterior Predictive Check) .....          | 287        |
| 11.6              | Exercises .....   | 288        |
| <br>              |   |            |
| <b>CHAPTER 12</b> | <b>Bayesian Approaches to Testing a Point (“Null”) Hypothesis</b> ..... | <b>295</b> |
| 12.1              | The Estimation (Single Prior) Approach .....                            | 296        |
| 12.1.1            | Is a Null Value of a Parameter among the Credible Values? .....         | 297        |
| 12.1.2            | Is a Null Value of a Difference among the Credible Values? .....        | 297        |
| 12.1.3            | Region of Practical Equivalence (ROPE) .....                            | 301        |
| 12.2              | The Model-Comparison (Two-Prior) Approach .....                         | 303        |
| 12.2.1            | Are the Biases of Two Coins Equal? .....                                | 303        |
| 12.2.2            | Are Different Groups Equal? .....                                       | 307        |
| 12.3              | Estimation or Model Comparison? .....                                   | 310        |
| 12.3.1            | What Is the Probability That the Null Value Is True? .....              | 310        |
| 12.3.2            | Recommendations .....   | 311        |

| <b>CHAPTER 13</b> | Goals, Power, and Sample Size .....                               | 319 |
| 13.1              | The Will to Power .....   | 320 |
| 13.1.1            | Goals and Obstacles.....  | 320 |
| 13.1.2            | Power .....   | 321 |
| 13.1.3            | Sample Size .....   | 323 |
| 13.1.4            | Other Expressions of Goals .....                                  | 325 |
| 13.2              | Sample Size for a Single Coin .....                               | 326 |
| 13.2.1            | When the Goal Is to Exclude a Null Value.....                     | 326 |
| 13.2.2            | When the Goal Is Precision .....                                  | 327 |
| 13.3              | Sample Size for Multiple Mints .....                              | 329 |
| 13.4              | Power: Prospective, Retrospective, and<br>Replication.....        | 331 |
| 13.4.1            | Power Analysis Requires Verisimilitude<br>of Simulated Data ..... | 333 |
| 13.5              | The Importance of Planning .....                                  | 334 |
| 13.6              | R Code .....  | 335 |
| 13.6.1            | Sample Size for a Single Coin .....                               | 335 |
| 13.6.2            | Power and Sample Size for Multiple Mints.....                     | 338 |
| 13.7              | Exercises .....   | 346 |

### **Part 3**      **Applied to the Generalized Linear Model**

|                   |  |     |
|-------------------|--|-----|
| <b>CHAPTER 14</b> | Overview of the Generalized Linear Model.....              | 357 |
| 14.1              | The Generalized Linear Model (GLM).....                    | 358 |
| 14.1.1            | Predictor and Predicted Variables.....                     | 358 |
| 14.1.2            | Scale Types: Metric, Ordinal, Nominal.....                 | 359 |
| 14.1.3            | Linear Function of a Single Metric<br>Predictor.....       | 361 |
| 14.1.4            | Additive Combination of Metric Predictors .....            | 364 |
| 14.1.5            | Nonadditive Interaction of Metric<br>Predictors .....      | 366 |
| 14.1.6            | Nominal Predictors .....                                   | 368 |
| 14.1.7            | Linking Combined Predictors to the<br>Predicted .....      | 373 |
| 14.1.8            | Probabilistic Prediction .....                             | 377 |
| 14.1.9            | Formal Expression of the GLM .....                         | 379 |
| 14.1.10           | Two or More Nominal Variables Predicting<br>Frequency..... | 381 |
| 14.2              | Cases of the GLM .....                                     | 383 |
| 14.3              | Exercises .....  | 386 |

|                   |   |     |
|-------------------|---|-----|
| <b>CHAPTER 15</b> | Metric Predicted Variable on a Single Group.....                | 389 |
| 15.1              | Estimating the Mean and Precision of a Normal Likelihood.....   | 390 |
| 15.1.1            | Solution by Mathematical Analysis .....                         | 392 |
| 15.1.2            | Approximation by MCMC in BUGS .....                             | 395 |
| 15.1.3            | Outliers and Robust Estimation: The $t$ Distribution .....      | 397 |
| 15.1.4            | When the Data Are Non-normal: Transformations .....             | 399 |
| 15.2              | Repeated Measures and Individual Differences .....              | 403 |
| 15.2.1            | Hierarchical Model.....   | 405 |
| 15.2.2            | Implementation in BUGS .....                                    | 407 |
| 15.3              | Summary .....   | 408 |
| 15.4              | R Code .....  | 409 |
| 15.4.1            | Estimating the Mean and Precision of a Normal Likelihood .....  | 409 |
| 15.4.2            | Repeated Measures: Normal Across and Normal Within .....        | 411 |
| 15.5              | Exercises .....   | 414 |
| <b>CHAPTER 16</b> | Metric Predicted Variable with One Metric Predictor .....       | 419 |
| 16.1              | Simple Linear Regression .....                                  | 420 |
| 16.1.1            | The Hierarchical Model and BUGS Code .....                      | 422 |
| 16.1.2            | The Posterior: How Big Is the Slope? .....                      | 426 |
| 16.1.3            | Posterior Prediction.....                                       | 427 |
| 16.2              | Outliers and Robust Regression.....                             | 430 |
| 16.3              | Simple Linear Regression with Repeated Measures.....            | 433 |
| 16.4              | Summary .....   | 437 |
| 16.5              | R Code .....  | 437 |
| 16.5.1            | Data Generator for Height and Weight .....                      | 437 |
| 16.5.2            | BRugs: Robust Linear Regression .....                           | 439 |
| 16.5.3            | BRugs: Simple Linear Regression with Repeated Measures .....    | 442 |
| 16.6              | Exercises .....   | 446 |
| <b>CHAPTER 17</b> | Metric Predicted Variable with Multiple Metric Predictors ..... | 453 |
| 17.1              | Multiple Linear Regression .....                                | 454 |
| 17.1.1            | The Perils of Correlated Predictors .....                       | 454 |
| 17.1.2            | The Model and BUGS Program .....                                | 458 |

|        |   |     |
|--------|---|-----|
| 17.1.3 | The Posterior: How Big Are the Slopes? .....                        | 460 |
| 17.1.4 | Posterior Prediction.....   | 462 |
| 17.2   | Hyperpriors and Shrinkage of Regression<br>Coefficients.....        | 463 |
| 17.2.1 | Informative Priors, Sparse Data, and<br>Correlated Predictors.....  | 467 |
| 17.3   | Multiplicative Interaction of Metric Predictors .....               | 469 |
| 17.3.1 | The Hierarchical Model and BUGS Code .....                          | 470 |
| 17.3.2 | Interpreting the Posterior .....                                    | 472 |
| 17.4   | Which Predictors Should Be Included?.....                           | 476 |
| 17.5   | R Code .....  | 478 |
| 17.5.1 | Multiple Linear Regression .....                                    | 478 |
| 17.5.2 | Multiple Linear Regression with Hyperprior<br>on Coefficients ..... | 483 |
| 17.6   | Exercises .....   | 488 |

|                   |   |     |
|-------------------|---|-----|
| <b>CHAPTER 18</b> | Metric Predicted Variable with One Nominal<br>Predictor ..... | 491 |
| 18.1              | Bayesian Oneway ANOVA.....                                    | 492 |
| 18.1.1            | The Hierarchical Prior.....                                   | 493 |
| 18.1.2            | Doing It with R and BUGS .....                                | 495 |
| 18.1.3            | A Worked Example .....  | 497 |
| 18.2              | Multiple Comparisons .....                                    | 502 |
| 18.3              | Two-Group Bayesian ANOVA and<br>the NHST $t$ Test.....        | 506 |
| 18.4              | R Code .....  | 507 |
| 18.4.1            | Bayesian Oneway ANOVA.....                                    | 507 |
| 18.5              | Exercises .....   | 512 |

|                   |  |     |
|-------------------|--|-----|
| <b>CHAPTER 19</b> | Metric Predicted Variable with Multiple Nominal<br>Predictors.....       | 515 |
| 19.1              | Bayesian Multifactor ANOVA .....   | 516 |
| 19.1.1            | Interaction of Nominal Predictors .....                                  | 517 |
| 19.1.2            | The Hierarchical Prior.....  | 519 |
| 19.1.3            | An Example in R and BUGS .....   | 520 |
| 19.1.4            | Interpreting the Posterior .....   | 522 |
| 19.1.5            | Noncrossover Interactions, Rescaling, and<br>Homogeneous Variances ..... | 528 |
| 19.2              | Repeated Measures, a.k.a. Within-Subject<br>Designs .....                | 531 |
| 19.2.1            | Why Use a Within-Subject Design? And<br>Why Not?.....                    | 533 |

|                   |  |            |
|-------------------|--|------------|
| 19.3              | R Code .....   | 535        |
| 19.3.1            | Bayesian Two-Factor ANOVA.....                         | 535        |
| 19.4              | Exercises .....  | 544        |
| <b>CHAPTER 20</b> | <b>Dichotomous Predicted Variable .....</b>            | <b>549</b> |
| 20.1              | Logistic Regression.....                               | 550        |
| 20.1.1            | The Model .....  | 551        |
| 20.1.2            | Doing It in R and BUGS .....                           | 553        |
| 20.1.3            | Interpreting the Posterior .....                       | 553        |
| 20.1.4            | Perils of Correlated Predictors .....                  | 555        |
| 20.1.5            | When There Are Few 1's in the Data.....                | 556        |
| 20.1.6            | Hyperprior Across Regression Coefficients .....        | 556        |
| 20.2              | Interaction of Predictors in Logistic Regression ..... | 556        |
| 20.3              | Logistic ANOVA .....                                   | 557        |
| 20.3.1            | Within-Subject Designs.....                            | 561        |
| 20.4              | Summary .....  | 561        |
| 20.5              | R Code .....   | 562        |
| 20.5.1            | Logistic Regression Code .....                         | 562        |
| 20.5.2            | Logistic ANOVA Code .....                              | 567        |
| 20.6              | Exercises .....  | 572        |
| <b>CHAPTER 21</b> | <b>Ordinal Predicted Variable .....</b>                | <b>575</b> |
| 21.1              | Ordinal Probit Regression .....                        | 576        |
| 21.1.1            | What the Data Look Like .....                          | 576        |
| 21.1.2            | The Mapping from Metric $x$ to Ordinal $y$ .....       | 577        |
| 21.1.3            | The Parameters and Their Priors .....                  | 578        |
| 21.1.4            | Standardizing for MCMC Efficiency .....                | 579        |
| 21.1.5            | Posterior Prediction.....                              | 580        |
| 21.2              | Some Examples .....                                    | 581        |
| 21.2.1            | Why Are Some Thresholds Outside<br>the Data? .....     | 584        |
| 21.3              | Interaction .....                                      | 588        |
| 21.4              | Relation to Linear and Logistic Regression.....        | 588        |
| 21.5              | R Code .....   | 589        |
| 21.6              | Exercises .....  | 594        |
| <b>CHAPTER 22</b> | <b>Contingency Table Analysis .....</b>                | <b>597</b> |
| 22.1              | Poisson Exponential ANOVA.....                         | 598        |
| 22.1.1            | What the Data Look Like .....                          | 598        |
| 22.1.2            | The Exponential Link Function .....                    | 599        |

|                   |  |            |
|-------------------|--|------------|
| 22.1.3            | The Poisson Likelihood .....                                   | 601        |
| 22.1.4            | The Parameters and the Hierarchical Prior .....                | 603        |
| 22.2              | Examples .....   | 604        |
